

Location: Tarbert Power Station, Co. Kerry			Unique ID: 240363 (from PFRA database)			
Initial OPW Designation	APSR 🗌	AFRR 🗌		IRR 🖂		
Co-ordinates	Easting: 107750	)	Northi	ing: 149250		
River / Catchment / Sub-catchment	Shannon Estuary					
Type of Flooding / Flood Risk (identify all that apply)	Fluvial non-tidal  Fluvial tidal  Coastal					

(поениту ан тпат аррту)							
Stage 1: Desktop	Review						
1.1 Flood History	River Flow Path						
(include review of Floodmaps.ie)	At this location the Shannon Estuary is several km wide, fully influenced by the tide rather than fluvial flows, and is therefore noted as being vulnerable to "coastal" flooding rather than "fluvial tidal" flooding.						
	Flood event records						
	Flood events from Floodmaps.ie are as follows:						
	22 Ferry Road – Tarbert (Flood ID 3708)						
	The N67 which connects Tarbert village to the Car Ferry Pier which connects to the N67 on the Clare side of the Shannon via the ferry is flooded and impassable for 1/2 hours roughly twice per year. The cause is tidal combined with wind/waves. Water is dumped over the sea wall onto the road. This flooding is remote from the Power Station.						
	There are no records of flooding at the Power Station.						
1.2 Relevant information on flooding issues from	PFRA database comments (in italics):  OPW comments						
OPW and LA staff	No comments on ESB Power Station						
	LA comments						
	No comments on ESB Power Station						
	<b>Note:</b> For Tarbert itself, this was not designated as an APSR as it failed to reach the predictive analysis threshold, or to receive strong LA support. Minor flooding is noted.						
	Meeting / discussion summary comments:						
	OPW comments No comments						
	LA comments No comments
